

Project CY 8609

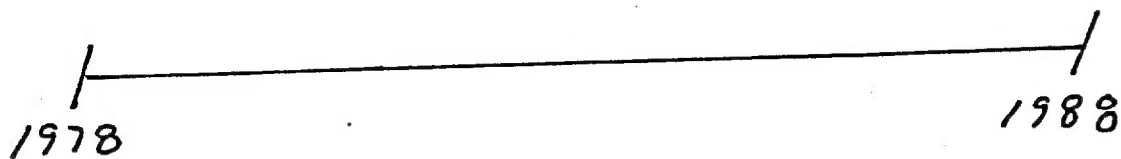

3k

1. Describe the Technical Facility located near:

SG1A

2. Within the following ten year period determine if and when any "special events" occur:

Note: If you do find any "special events" - - - subsequent sessions will be focused on each separate "special event."

contacted

Spaltung

S⁴/₂ shape of mass is important. Must be 'faceted' at specific angle + specific shaped/sized planes to function as desired.

S⁴/₂ mass is fixed in space;

using
high tensile
steel brackets

S⁴/₂ something dangerous to human physical well being about the Spaltung process, + therefore is contained inside protective structuring.

Radiation
Heat
involved
released

S⁴/₂ mass is inside hollow space - i.e. nothing else needs be in immediate vicinity, indeed would "get in the way."

SUI

3.

AI BLK
being heavy
it is physical
- is unsettling,
threatening

S 4 1/2 at point "chuckle" parts w/force - sharp - sudden, rapid event. "like" mass is loaded more + more with somewhat of stress/energy/force until a threshold is reached for the disintegrating of the smaller piece or pieces - can't be predicted which part a piece will be first to go, so equipment design is such that any "piece" can go & still accomplish desired effect. Mass is "degraded" or somehow no longer adequate to be used further after this point & must be replaced with a fresh "mass" to continue. Old "mass" may possibly be regenerated/recycled/reprocessed by being reduced from precise shape, then reprocessed to be used again (i.e. "crushed", mixed w/ fresh material, then reconstituted + formed).

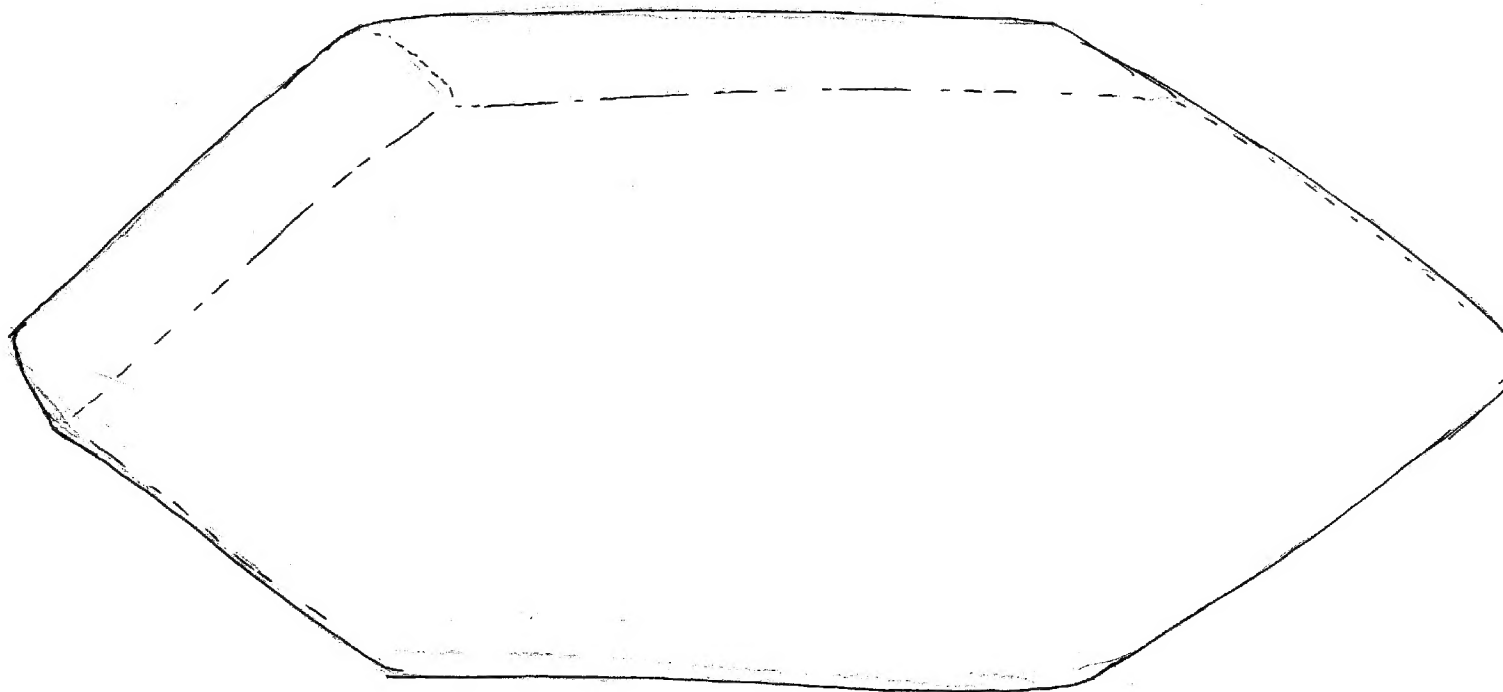

chamber

like an
autoclave

S 4 1/2 in travel, "chuckle" is controlled, changes direction smoothly, ie going around curve.
